Principles & Objectives of the 1st annual SSHRC Partnership Convention

This convention is the first in a series of five annual meetings that will take place from 2022 to 2027. It brings together over 120 participants from across Canada at the invitation of partners associated to 14 universities.

The theme of the first convention is
Barriers to quality in the built environment: How can sustainability and equity be combined to increase the social value of built urban environments?

Although the structure of this gathering, which will alternate between short plenary 15-minute presentations and 3 series of 1.5 hr. roundtables, may evoke the program of scientific conferences or professional congresses, the format of this convention is not that of an ordinary conference. **It should be understood as a general repetition of the principle of roundtables with four types of partners.** According to this principle, our partnership is based on the conviction that any discussion prior to the establishment of **roadmaps to quality** should take place in a participatory space bringing together representatives of the public and professional sectors around representatives of citizen groups. In this 3-day workshop, academic researchers prepare and facilitate discussions based on exemplary case studies, comparative analyses of award-winning cases, and post-occupancy evaluations (starting in the second year).

Each of the participants comes with a piece of the puzzle and accepts to leave their comfort zone, starting with university researchers who will take a back seat in a listening and facilitation posture - and, of course, in a synthesis posture - more than in the role of lecturer in the traditional sense of the term.

The first half-day will establish the basis for the governance structure of the partnership (see annex #1), while the last half-day serves as an open discussion and organizing session for each group's work back in its urban or regional context. Between these milestones, the aim is to co-construct new ways of working together to define qualitative protocols that can respond to the greatest possible variety of urban situations (see annex #5).

As a matter of principle, the 3 series of 5 roundtables will link discussions with citizen groups, professional organizations, public procurement and scientific partners. The order of the discussions is left to the initiative of the participants and can be adapted to each group depending on the synergies that are established. The academic facilitators or "site leaders" will ensure that all partners can express themselves while giving ample room for student questions.

Students will be identified to collect three types of information from these roundtables:
> 1 - Testimonials describing explicit barriers to quality
> 2 - Suggestions for case studies to analyze these obstacles to quality
> 3 - Ideas and suggestions for ensuring the social value of participatory processes to increase quality at the interface of equity and sustainability

At the end of each series of roundtables, student reporters will briefly present some highlights from these idea gatherings. Reports will be produced after the convention and will circulate among all partners for feedback. Along with reports produced by each research site during the fall local roundtables, a synthesis of the first annual convention will constitute the basis for an online convention in December 2022.

The issue of quality will, of course, be on the agenda of all discussions. However, it will not be so much a matter of debating theoretical definitions of quality as of illustrating, as concretely as possible, the false paths and, even more so, the current normative or procedural obstacles in order to set a work program for the coming year in each of the research sites across Canada.
